#12HB HIGH BLAST MIXER

OPERATION

High Blast Mixers are compact air/gas mixers used in installations where high pressure air is available. These economical units are ideally suited to manual control operation for a wide range of heating applications where low pressure air is not available.

High Blast Mixers use small amounts of high pressure air (approximately 10%) to pickup incoming gas at the mixer.

Air at 20 to 100 psig is passed through a primary modified venturi which inspirates an equal amount of gas and elevates its pressure. The resultant mixture of one part air and one part gas is delivered to

the main orifice at approximately 40% of the inlet air pressure.

The Hijector (the main venturi of the High Blast Mixer) efficiently entrains large quantities of combustion air and delivers the mixture to the burner system. The mixture produces a hard, sharp, clear blue, typical blast flame. The high pressure air valve and primary air shutter provide for wide ranges of adjustment.

Injector type design of high pressure stage prevents air feed back into the gas line. Capacities listed in the table are for 90% primary air and may be increased where adequate secondary is available.

CAPACITY TABLE

Catalog Number	Minimum Burner Area Sq. Inches	Gas in 1000's Btu/Hr. and Air in CFM											
		Air Pressure, psig											
		20		40		60		80		100		120	
		Average Mixture Pressure, Inches W.C.											
		2.5"		5"		7.5"		10"		12.5"		15"

CAUTION: Operation of combustion equipment can be hazardous resulting in bodily injury or equipment damage. Each burner should be supervised by a combustion safeguard and only qualified personnel should install, make system adjustments and perform any required service.

24HB	1-1/4	3/8	3	26-7/16	8-5/8	5-1/8	26.00
32HB	1-1/2	3/8	4	32-5/16	9-11/16	5-5/16	42.50

Note: All dimensions are in inches.

INSTALLATION

1. Make high pressure air and gas connections. These may be pipe or flexible hoses.
2. The connections should not be smaller than the valve sizes.
3. Minimum gas pressures: Manufactured 5" w.c.; Mixed 3" w.c.; Natural, Propane or Butane 1" w.c.
4. Check air and gas lines for leaks.

ADJUSTMENT

1. Loosen locknut on body and open primary air shutter wide.
2. Open high pressure air valve.
3. Light pilot or hold lighting torch alongside burners and slowly open gas cock.
4. After flame is lighted, flame character is adjusted by the setting of the gas cock.
5. Opening gas wider gives a softer, longer flame. Closing it

slightly produces a sharper, shorter flame.

6. To shut off torch, close gas valve first and then air valve.

ORDERING INFORMATION

Please include the following information for each size High Blast Mixer ordered:

1. Number required and size.
2. HB assemblies include both air globe valve and gas cock. State if these are not required.
3. Kind of gas and available pressure.
4. Air pressure available.
5. Shipping instructions.

If in doubt about High Blast Mixer selection or use, send full details of the application so we may assist you.
